

Awais Nawaz

Junior Full Stack Developer

Personal Statement

Dynamic and dedicated individual with a strong passion for coding and software development. Recently completed a rigorous 3-month software development bootcamp, equipped with a solid foundation in programming languages and web technologies. Seeking a Software Engineer apprenticeship to learn and contribute technical skills and enthusiasm to a collaborative team.

Projects

My Portfolio Page

- I've meticulously crafted a responsive portfolio page from the ground up, leveraging the power of HTML, CSS, and JavaScript. This minimalistic yet aesthetically pleasing portfolio serves as a showcase of my dedication to clean design and user experience.
- Through strategic layout and fluid responsiveness, it seamlessly adapts to various devices, ensuring a visually appealing presentation of my projects and skills.
- The navigation is intuitive, providing quick access to my projects and connecting visitors with my email, LinkedIn, and GitHub profiles effortlessly. The implementation of JavaScript enhances user interactions, creating a dynamic and engaging experience that complements the portfolio's clean design.

Napture.X

- Explore the wonders of nature through the captivating landing page I designed exclusively for laptops, showcasing the beauty of Napture.X, a nature park like no other.
- Using a combination of HTML, CSS, and JavaScript, I've brought the park to life on your screen, delivering an immersive experience that unfolds as you scroll.
- From interactive elements to seamless animations triggered by the intersection observer, this page captures the essence of Napture.X, inviting users to embark on a digital journey through the park's serene landscapes.

FilmFlix.db

- I have developed a backend project named Filmflix.db using Python and SQLite, dedicated to managing and organising information about various films. The database stores essential details like release year, genre, and ratings for each film. This project allows seamless manipulation of film data, providing functionalities to add, delete, show, and update film records.
- The implementation of Python ensures efficient data handling, while the integration with SQLite ensures a robust and scalable database structure. Filmflix.db showcases my proficiency in backend development and database management, highlighting my ability to create a dynamic and functional system for organising film-related information.
